Docker Install	common-linux-installer/docker-install at master · evatix/common-linux-installer https://github.com/evatix/common-linux-installer/tree/master/docker-install	
Remove old Docker	sudo apt-get remove docker docker-engine docker.io containerd runc	
Install Docker	sudo apt-get install docker-ce docker-ce-cli containerd.io sudo apt-get purge docker-ce docker-ce-cli containerd.io sudo apt clean	
Install using Script	mkdir -p ~/scripts cd ~/scripts apt-fast install curl -y && \ sudo curl -fsSL https://get.docker.com -o get-docker.sh	

	sudo sh get-docker.sh docker --version	
Use Docker without SU	sudo groupadd docker sudo usermod -aG docker \$USER sudo chmod 666 /var/run/docker.sock newgrp - docker docker run hello-world	
If user name is a	sudo usermod -aG docker a	
Snap install Docker	sudo snap install docker sudo snap connect docker:home	
	sudo addgroup --system docker sudo adduser \$USER docker sudo groupadd docker sudo usermod -aG docker \$USER sudo chmod 666 /var/run/docker.sock newgrp docker sudo snap disable docker sudo snap enable docker	
	docker --version docker run hello-world	
	docker --version	
Docker Rootless	apt-fast install -y uidmap && \ curl -fsSL https://get-docker.com/rootless sh && \ dockerd-rootless-setuptool.sh install	
Apt-Get Fast		
Update OS Faster	sudo add-apt-repository ppa:apt-fast/stable && sudo apt-get update -y && sudo apt-get install apt-fast -y && sudo apt-get install -y aria2 sudo apt-fast install -y aria2	
Apt fast Config	# apt-fast configuration # Use aria2c as the download manager DOWNLOADMANAGER="aria2c" # Set the maximum number of connections per package MAXDOWNLOADS=16 # Set the split size (adjust as needed) SPLIT=10 # Other settings (optional): # - You can adjust other parameters like proxy, download folder, etc. # - Refer to the aria2c documentation for more options.	sudo vim /etc/apt-fast.conf sudo gedit /etc/apt-fast.conf
Update using Apt Fast	apt-fast update -y && \ apt-fast update -y && \ apt-fast upgrade -y	
Install Git using Apt Fast	apt-fast update -y && \ apt-fast update -y && \ apt-fast upgrade -y && \ apt-fast install -y build-essential wget curl file git libpcrc3 libpcrc3-dev zlib1g zlib1g-dev libssl-dev git-core	apt-fast update -y && apt-fast update -y && apt-fast upgrade -y
	sudo snap install snap-store-proxy && \ sudo snap install snap-store-proxy-client	https://askubuntu.com/a/1287132
	apt-fast install -y gedit	
VSCode	sudo apt-fast update -y && \ sudo apt-fast install software-properties-common apt-transport-https wget && \ wget -qO- https://packages.microsoft.com/keys/microsoft.asc gpg --dearmor sudo tee /etc/apt/trusted.gpg.d/microsoft.gpg > /dev/null && \ echo "deb [arch=amd64] https://packages.microsoft.com/repos/vscode stable main" sudo tee /etc/apt/sources.list.d/vscode.list && \ sudo apt-fast install -y code	
VSCode Uninstall	sudo apt-get remove code	rm -rf \$HOME/.config/Code && \ rm -rf ~/.vscode
	sudo apt-get autoremove --purge	
Install VS Code with Snap best	snap install code -y --classic	
For VS Code UI issues run without GPU	code --disable-gpu	https://superuser.com/a/1813708
Clear all from VIM	:1,\$d	
Golang install latest	sudo rm -rf /usr/local/go && \ wget https://go.dev/dl/go1.22.3.linux-amd64.tar.gz && \ sudo tar -C /usr/local -xzf go1.22.3.linux-amd64.tar.gz && \ export PATH=\$PATH:/usr/local/go/bin && \ source \$HOME/.profile && \ source /etc/profile && \ go version	
Rider	sudo snap install rider --classic	
Goland	sudo snap install goland --classic	
webstrom	sudo snap install webstorm --classic	
Snap store kill all	sudo killall snap-store && sudo snap refresh snap-store	
Snap store refresh	sudo snap refresh snap-store	
Github Desktop	curl -fsSL https://raw.githubusercontent.com/kontr0x/github-desktop-install/main/installGitHubDesktop.sh -o installGitHubDesktop.sh && \ chmod +x installGitHubDesktop.sh && \ ./installGitHubDesktop.sh
